AccuFill® Bulking Systems

AccuFill® Bulking Systems automate the collection of bulk pack products, providing labor savings, increased process efficiencies and a lower cost of ownership compared to other systems.

Product is fed via a conveyor or other material handling device to the bulking system. Products are collected in a hopper assembly that is connected to a load cell. If it is a dual system, once a pre-programmed target weight is achieved, a gate on the buffer hopper closes and product is diverted to the other hopper assembly for collection and weighing. The hopper with the collected product is automatically or manually accepted … then discharged into a material handling container.

The system continues cycling until parameter changes are required, a process break occurs, or the end of the shift is reached. The system is then ready to be switched to washdown mode for sanitation purposes.
Advantages and Benefits

- High return on investment
- Reduced product "giveaway"
- Labor savings – most applications at least one operator per shift
- Higher volumes achieved than with manual labor alone
- Real-time process reporting
- Multiple delivery options:
  – Specialty boxes
  – 30 / 60 lb. boxes
  – Export size containers
- Maintenance-friendly ... easily accessible for service
Features

- Suitable for all meat species and further-processed products
- Single & dual systems available
- Smaller footprint
- AMI sanitary design
- Gainco Infiniti® Plus programmable controller
- RF / WiFi connectivity
- Ethernet
- Fully integrates with optional proprietary data management software program
