

## THE AI EVOLUTION IN FOOD SORTING

AN **ATS** COMPANY

**From "massive" to "punctual" vision  
for unprecedented efficiency**

**OPPORTUNITY** is an optical food sorter which exploits artificial intelligence (Deep Learning) for 360-degree product quality control.

Thanks to the roller belt (spin belt) that allows products to rotate and matrix cameras to capture entire frames of the rolling product, the software enables increased product quality, completely replacing manual sorting.

**OPPORTUNITY** is based on the principle of self-learning and can be adapted to the selection of different types of products. With its compact design and ability to communicate with other machines, Opportunity can be easily placed within processing lines to contribute to complete production automation.

**OPPORTUNITY** is capable of performing a real-time "identikit" of each product, on each side. This enables to identify even the slightest defect and presence of necrotic in any part of the tomato. The great advantage of artificial intelligence, is that the machine is "trained" with the acquisition of many images and easily adapts to the growing needs of quality control.

## Benefits

**High production capacity**

**Low maintenance**

**Constant selection over time**

**Automatic capture of images**

**Real time detection**

**User friendly software**

## Technical data

MODEL	OY-600	OY-1200	OY-1800
<b>Capacity</b>	Up to 10t/h	Up to 20t/h	Up to 30t/h
<b>Machine length</b>	3.600 mm		
<b>Inspection belt width</b>	600 mm	1.200 mm	1.800 mm
<b>Inspection belt speed</b>	20-45 m/min		
<b>Pixel size</b>	0,3x0,3 mm		
<b>Number of ejection valves</b>	6	12	18
